## 1 Introduction

Beamer is a great way to make presentations with LaTeX, but its theme selection is surprisingly sparse. The stock themes share an aesthetic that can be a little

cluttered, while the few distinctive custom themes available are often specialized for a particular corporate or institutional brand.

The goal of `moloch` is to provide a simple, modern Beamer theme suitable for anyone to use. It tries to minimize noise and maximize space for content; the only visual flourish it offers is an (optional) progress bar added to each slide or to the section slides.

`moloch`'s codebase is maintained at <https://github.com/jolars/moloch>. If you have any issues, find mistakes in the manual or want to help make the theme even better, please get in touch there.

`moloch` is a fork of the popular Metropolis theme by Matthias Vogelgesang. The motivation for the fork was to fix some longstanding bugs in Metropolis and also simplify the codebase to make it easier to maintain and less fragile to changes in the underlying Beamer code.

## 2 Getting Started

### 2.1 Installing from CTAN

For most users, we recommend installing `moloch` from [CTAN](#). If you keep your  $\text{\TeX}$  distribution up-to-date, chances are good that `moloch` is already installed. If it is not, you need to update your packages. If your distribution is  $\text{\TeX}$  Live (or Mac $\text{\TeX}$  on OS X), the following command updates all packages.

```
tlmgr update --all
```

If this results in an error, you may need to run it with administrative privileges:

```
sudo tlmgr update --all
```

Mac $\text{\TeX}$  on OS X also provides a graphical interface for `tlmgr` called  $\text{\TeX}$  Live Utility.

For any other distribution please refer to its documentation on how to update your packages.

### 2.2 Installing from Source

If you want to use the development version of `moloch`, you can install it manually. You only need a recent  $\text{\LaTeX}$  distribution which includes `l3build`. Then simply follow the steps below.

**Download the source** with a git clone of <https://github.com/jolars/moloch>

**Install the package** by running `l3build install` inside the downloaded directory.

### 2.3 A Minimal Example

The following code shows a minimal example of a Beamer presentation using moloch.

```
\documentclass{beamer}
\usepackage{moloch}
\title{A minimal example}
\date{\today}
\author{Johan Larsson}
\institute{Centre for Modern Beamer Themes}
\begin{document}
\maketitle
\section{First Section}
\begin{frame}{First Frame}
Hello, world!
\end{frame}
\end{document}
```

### 2.4 Dependencies

moloch depends on the `beamer` class and the following standard packages:

- tikz
- pgfopts
- calc

### 2.5 Pandoc

To use this theme with `Pandoc`-based presentations, you can run the following command

```
$ pandoc -t beamer -V theme:moloch -o output.pdf input.md
```

## 3 Customization

### 3.1 Package options

The theme provides a number of options, which can be set using a key=value interface. The primary way to set options is to provide a comma-separated list of option-value pairs when loading `moloch` in the preamble:

```
\usetheme[option1=value1, option2=value2, ...]{moloch}
```

Options can be changed at any time—even mid-presentation—with the `\molochset` macro.

```
\molochset{option1=newvalue1, option2=newvalue2, ...}
```

The list of options is structured as shown in the following example.

option key	<i>list of possible values</i>	.....	default
	A short description of the option.		

#### 3.1.1 Inner theme

sectionpage	<i>none, simple, progressbar</i>	.....	progressbar
	Adds a slide at the start of each section ( <code>simple</code> ) with an optional thin progress bar below the section title ( <code>progressbar</code> ). The <code>none</code> option disables the section page.		

subsectionpage	<i>none, simple, progressbar</i>	.....	none
	Optionally adds a slide at the start of each subsection. If enabled with the <code>simple</code> or <code>progressbar</code> options, the style of the <code>section page</code> will be updated to match the style of the <code>subsection page</code> . Note that section slides and subsection slides can appear consecutively if both are enabled; you may want to use this option together with <code>sectionpage=none</code> depending on the section structure of your presentation.		

#### 3.1.2 Outer theme

numbering	<i>none, counter, fraction</i>	.....	
	<i>This option is deprecated and will be removed in a future version. Please use Beamer's page number in head/foot template instead.</i>		
	Controls whether the frame number at the bottom right of each slide is omitted ( <code>none</code> ), shown ( <code>counter</code> ) or displayed as a fraction of the total number of frames ( <code>fraction</code> ).		

```
progressbar none, head, frametitle, foot..... none
```

Optionally adds a progress bar to the top of each frame (`head`), the bottom of each frame (`foot`), or directly below each frame title (`frametitle`).

### 3.1.3 Color theme

```
block transparent, fill..... transparent
```

Optionally adds a light grey background to block environments like `theorem` and `example`.

```
background dark, light..... light
```

Provides the option to have a dark background and light foreground instead of the reverse.

## 3.2 Color Customization

The included `moloch` color theme is used by default, but its colors can be easily changed to suit your tastes. All of the theme's styles are defined in terms of three beamer colors:

- `normal text` (dark fg, light bg)
- `alerted text` (colored fg, should be visible against dark or light)
- `example text` (colored fg, should be visible against dark or light)

An easy way to customize the theme is to redefine these colors using

```
\setbeamercolor{ ... }{ fg= ... , bg= ... }
```

in your preamble. For greater customization, you can redefine any of the other stock beamer colors. In addition to the stock colors the theme defines a number of `moloch` specific colors, which can also be redefined to your liking.

```
\setbeamercolor{progress bar}{ ... }
\setbeamercolor{title separator}{ ... }
\setbeamercolor{progress bar in head/foot}{ ... }
\setbeamercolor{progress bar in section page}{ ... }
```

For low-light situations `moloch` it might be helpful to use the `moloch-highcontrast` color theme. It is enabled like any other color theme:

```
\usecolortheme{moloch-highcontrast}
```

### 3.3 Commands

#### 3.3.1 Standout frames

The `moloch` inner theme offers a custom frame format with large, centered text and an inverted background—perfect for focusing attention on single sentence or image. To use it, add the key `standout` to the frame:

```
\begin{frame}[standout]
    Thank you!
\end{frame}
```

## 4 Known Issues

### 4.1 Interactions with other color themes

`moloch` can be used along with any other Beamer color theme, such as `crane` or `seahorse`. If you wish to do this, it is usually best to include the `moloch` subpackages individually so the `moloch` color theme is never loaded. This will prevent conflicts between the `moloch` color theme and your preferred theme.

For example, overriding the color theme as follows may not work as expected because `\usetheme{moloch}` loads the `moloch` color theme, which defines a relationship between the frametitle background and the primary palette of the theme. Since `seahorse` assumes a different relationship between its palettes, the result is a grey, rather than periwinkle, frametitle background.

```
\usetheme{moloch}
\usecolortheme{seahorse}
```

The correct colors are chosen if the `moloch` outer, inner, and font themes are loaded separately:

```
\useoutertheme{moloch}
\useinnertheme{moloch}
\usefonttheme{moloch}
\usecolortheme{seahorse}      % or your preferred color
                           theme
```

Please note that `moloch` may not use all the colors defined in your favourite Beamer color theme. In particular, `moloch` does not set a background color for the title; this will cause issues when using color themes like `whale` which set a white foreground

for the title.

## 4.2 Notes on second screen

If you use the `[show notes on second screen]` option built in to Beamer and compile with X<sub>E</sub>LATE<sub>X</sub>, text on slides following the first section slide may be rendered in white instead of the regular colour. This is due to a [bug](#) in Beamer or X<sub>E</sub>LATE<sub>X</sub> itself. You can work around it either by compiling with LuaT<sub>E</sub>X or by adding the following code to your preamble to reset the text color on each slide.

```
\makeatletter
\def\beamer@framenotesbegin{\% at beginning of slide
  \usebeamercolor[fg]{normal text}
  \gdef\beamer@noteitems{}%
  \gdef\beamer@notes{}%
}
\makeatother
```

## 4.3 Standout frames with labels

Because the `standout` frame option creates a group to restrict the colour change to a single slide, labels defined after calling `standout` will stay local to the group. In other words, the following may result in a “label undefined” error.

```
\begin{frame}[standout, label=conclusion]{Conclusion}
  Awesome slide
\end{frame}
```

To fix this problem, change the order of the keys in the frame.

```
\begin{frame}[label=conclusion, standout]{Conclusion}
  Awesome slide
\end{frame}
```

This error can be unwittingly triggered if you export your slides from Emacs Org mode, which automatically adds labels after frame options. Alex Branham [offers](#) the following solution for Org mode users, using `org-set-property`.

```
* Start of a frame
:PROPERTIES:
:BEAMER_opt: label=conclusion, standout
```

: END :

## 4.4 Standout frames with Pandoc

With Pandoc versions prior 1.17.2 it was not possible to create standout frames because Pandoc only supported a specific list of frame attributes thus ignoring additional attributes such as `{.standout}`.

## 5 License

`moloch` is licensed under a [Creative Commons Attribution-ShareAlike 4.0 International License](#). This means that if you change the theme and re-distribute it, you must retain the copyright notice header and license it under the same CC-BY-SA license. This does not affect any presentations that you create with the theme.

## 6 Implementation

### 6.1 `moloch` parent theme

The primary job of this package is to load the component sub-packages of the `moloch` theme and route the theme options accordingly. It also provides some custom commands and environments for the user.

#### 6.1.1 Package dependencies

```
1 \RequirePackage{pgfopts}
```

#### 6.1.2 Options

Most options are passed off to the component sub-packages.

```
2 \pgfkeys{/moloch/.cd,  
3   .search also={  
4     /moloch/inner,  
5     /moloch/outer,  
6     /moloch/color,  
7     /moloch/font,  
8   }  
9 }
```

To avoid generating externalized figures of the progressbar we have to disable them with “tikzexternalenable” and “tikzexternaldisable”. However, if the “external”

library is not loaded we would get undefined control sequence problems, hence we define them as no-ops if they are not defined yet.

```
10 \providecommand{\tikzexternalenable}{}  
11 \providecommand{\tikzexternaldisable}{}  
  
12 \useinnertheme{moloch}  
13 \useoutertheme{moloch}  
14 \usecolortheme{moloch}  
15 \usefonttheme{moloch}
```

### 6.1.3 Component sub-packages

Having processed the options, we can now load the component sub-packages of the theme.

```
12 \useinnertheme{moloch}  
13 \useoutertheme{moloch}  
14 \usecolortheme{moloch}  
15 \usefonttheme{moloch}
```

### 6.1.4 Custom commands

The parent theme defines custom commands as their proper usage may depend on multiple sub-packages.

`\molochset` Allows the user to change options midway through a presentation.

```
16 \newcommand{\molochset}[1]{\pgfkeys{/moloch/.cd,#1}}
```

`\mreducelistspacing`

```
17 \newcommand{\mreducelistspacing}{\vspace{-\topsep}}
```

### 6.1.5 Process package options

```
18 \ProcessPgfOptions{/moloch}
```

## 6.2 moloch inner theme

A `beamer` inner theme dictates the style of the frame elements traditionally set in the “body” of each slide. These include:

- title, part, and section pages;
- itemize, enumerate, and description environments;
- block environments including theorems and proofs;
- figures and tables; and
- footnotes and plain text.

### 6.2.1 Package dependencies

```
19 \RequirePackage{keyval}
20 \RequirePackage{calc}
21 \RequirePackage{pgfopts}
22 \RequirePackage{tikz}
```

### 6.2.2 Options

`sectionpage` Optionally add a slide marking the beginning of each section.

```
23 \pgfkeys{
24   /moloch/inner/sectionpage/.cd,
25   .is choice,
26   none/.code=\moloch@disablesectionpage,
27   simple/.code={%
28     \moloch@enablesectionpage%
29     \setbeamertemplate{section page}[simple]%
30   },
31   progressbar/.code={%
32     \moloch@enablesectionpage%
33     \setbeamertemplate{section page}[progressbar]%
34   },
35 }
```

`subsectionpage` Optionally add a slide marking the beginning of each subsection.

```
36 \pgfkeys{
37   /moloch/inner/subsectionpage/.cd,
38   .is choice,
39   none/.code=\moloch@disablessubsectionpage,
40   simple/.code={%
41     \moloch@enablessubsectionpage%
42     \setbeamertemplate{section page}[simple]%
43   },
44   progressbar/.code={%
45     \moloch@enablessubsectionpage%
46     \setbeamertemplate{section page}[progressbar]%
47   },
48 }
```

`\moloch@inner@setdefaults` Set default values for inner theme options.

```
49 \newcommand{\moloch@inner@setdefaults}{
50   \pgfkeys{/moloch/inner/.cd,
51   sectionpage=progressbar,
```

```

52     subsectionpage=none
53 }
54 }
```

### 6.2.3 Title page

**title page** Template for the title page. Each element is only typeset if it is defined by the user. If `\subtitle` is empty, for example, it won't leave a blank space on the title slide.

```

55 \setbeamertemplate{title page}{
56   \begin{minipage}[b]{\paperheight}{\textwidth}
57     \null%
58     \vfill%
59     \ifx\inserttitlegraphic\empty\else\usebeamertemplate*{title graphic}\fi
60     \ifx\inserttitle\empty\else\usebeamertemplate*{title}\fi
61     \ifx\insertsubtitle\empty\else\usebeamertemplate*{subtitle}\fi
62     \usebeamertemplate*{title separator}
63     \expandafter\ifblank\expandafter{\beamer@andstripped}{}{%
64       \usebeamertemplate*{author}%
65     }
66     \ifx\insertinstitute\empty\else\usebeamertemplate*{institute}\fi
67     \ifx\insertdate\empty\else\usebeamertemplate*{date}\fi
68     \vfill
69     \null
70   \end{minipage}%
71 }
```

Normal people should use `\maketitle` or `\titlepage` instead of using the `title page` beamer template directly. Beamer already defines these macros, but we patch them here to make the title page [plain] by default, remove `\@thanks`, and ensure the title frame number doesn't count.

**\maketitle** Inserts the title frame, or causes the current frame to use the `title page` template.

```

\titlepage
72 \def\maketitle{%
73   \ifbeamer@inframe
74     \titlepage
75   \else
76     \frame[plain,noframenumbering]{\titlepage}
77   \fi
78 }
79 \def\titlepage{%
80   \usebeamertemplate{title page}
```

```
81 }
```

**title graphic** Set the title graphic in a zero-height box, so it doesn't change the position of other elements.

```
82 \setbeamertemplate{title graphic}{  
83   \inserttitlegraphic%  
84   \par%  
85   \vspace*{1em}  
86 }
```

**title** Set the title on the title page.

```
87 \setbeamertemplate{title}{  
88   \raggedright%  
89   \inserttitle%  
90   \par%  
91   \vspace*{0.2em}  
92 }
```

**subtitle** Set the subtitle on the title page.

```
93 \setbeamertemplate{subtitle}{  
94   \raggedright%  
95   \insertsubtitle%  
96   \par%  
97   \vspace*{0.2em}  
98 }
```

**title separator** Template to set the title graphic in a zero-height box. (It won't change the position of other elements.)

```
99 \newlength{\moloch@titleseparator@linewidth}  
100 \setlength{\moloch@titleseparator@linewidth}{0.4pt}  
101 \setbeamertemplate{title separator}{  
102   \tikzexternaldisable%  
103   \begin{tikzpicture}  
104     \fill[fg] (0,0) rectangle (\textwidth, \moloch@titleseparator@linewidth);  
105   \end{tikzpicture}%  
106   \tikzexternalenable%  
107   \par%  
108   \vspace*{0.8em}  
109 }
```

`author` Set the author on the title page.

```
110 \setbeamertemplate{author}{  
111   \raggedright%  
112   \insertauthor%  
113   \par%  
114   \vspace*{0.5em}  
115 }
```

`institute` Set the institute on the title page.

```
116 \setbeamertemplate{institute}{  
117   \insertinstitute%  
118   \par%  
119   \vspace*{1em}  
120 }
```

`date` Set the date on the title page.

```
121 \setbeamertemplate{date}{  
122   \insertdate%  
123   \par%  
124 }
```

#### 6.2.4 Section page

`section page` Template for the section title slide at the beginning of each section.

```
125 \defbeamertemplate{section page}{simple}{  
126   \begin{center}  
127     \usebeamercolor[fg]{section title}  
128     \usebeamerfont{section title}  
129     \insertsectionhead\par  
130     \ifx\insertsubsectionhead\empty\else  
131       \usebeamercolor[fg]{subsection title}  
132       \usebeamerfont{subsection title}  
133       \insertsubsectionhead  
134     \fi  
135   \end{center}  
136 }  
137 \defbeamertemplate{section page}{progressbar}{  
138   \centering  
139   \begin{minipage}{0.7875\linewidth}  
140     \raggedright  
141     \usebeamercolor[fg]{section title}
```

```

142     \usebeamertemplate{section title}
143     \insertsectionhead\[-1ex]
144     \usebeamertemplate*[progress bar in section page]{}
145     \par
146     \ifx\insertsubsectionhead\@empty\else%
147         \usebeamercolor[fg]{subsection title}%
148         \usebeamertemplate{subsection title}%
149         \insertsubsectionhead
150     \fi
151 \end{minipage}
152 \par
153 \vspace{\baselineskip}
154 }
155 \newcommand{\moloch@disablesectionpage}{%
156     \AtBeginSection{%
157         % intentionally empty
158     }
159 }
160 \newcommand{\moloch@enablesectionpage}{%
161     \AtBeginSection{%
162         \ifbeamer@inframe
163             \sectionpage
164         \else
165             \frame[plain,c,noframenumbering]{\sectionpage}
166         \fi
167     }
168 }

```

**subsection page** Template for the subsection title slide that can optionally be added to at the beginning of each subsection.

```

169 \setbeamertemplate{subsection page}{%
170     \usebeamertemplate*[section page]{}
171 }
172 \newcommand{\moloch@disablesubsectionpage}{%
173     \AtBeginSubsection{%
174         % intentionally empty
175     }
176 }
177 \newcommand{\moloch@enablesubsectionpage}{%
178     \AtBeginSubsection{%
179         \ifbeamer@inframe
180             \subsectionpage
181         \else

```

```

182     \frame[plain,c,noframenumbering]{\subsectionpage}
183     \fi
184 }
185 }
```

`progress bar in section page` Template for the progress bar displayed by default on the section page. This code is duplicated in large part in the outer theme's template `progress bar in head/foot`.

```

186 \newlength{\moloch@progressonsectionpage}
187 \newlength{\moloch@progressonsectionpage@linewidth}
188 \setlength{\moloch@progressonsectionpage@linewidth}{0.4pt}
189 \setbeamertemplate{progress bar in section page}{
190   \pgfmathsetlength{\moloch@progressonsectionpage}{
191     \textwidth * min(1,\insertframenumber/\inserttotalframenumber)
192   }
193   \tikzexternaldisable
194   \begin{tikzpicture}
195     \fill[bg]
196     (0,0)
197     rectangle
198     (\textwidth, \moloch@progressonsectionpage@linewidth);
199     \fill[fg]
200     (0,0)
201     rectangle
202     (\moloch@progressonsectionpage, \moloch@progressonsectionpage@linewidth);
203   \end{tikzpicture}
204   \tikzexternalenable
205 }
```

The above code assumes that `\insertframenumber` is less than or equal to `\inserttotalframenumber`. However, this is not true on the first compile; in the absence of an `.aux` file, `\inserttotalframenumber` defaults to 1. This behaviour could cause fatal errors for long presentations, as `\moloch@progressonsectionpage` would exceed  $\text{\TeX}$ 's maximum length (16383.99999pt, roughly 5.75 metres or 18.9 feet). To avoid this, we increase the default value for `\inserttotalframenumber`; presentations with over 4000 slides will still break on first compile, but users in that situation likely have deeper problems to solve.

```
206 \def\inserttotalframenumber{100}
```

### 6.2.5 Lists and floats

```

207 \setbeamertemplate{itemize item}{\(\bullet\)}
208 \setbeamertemplate{itemize subitem}{\(\circ\)}
```

```

209 \setbeamertemplate{itemize subsubitem}{\textbullet}
210 \setbeamertemplate{caption label separator}{: }
211 \setbeamertemplate{caption}[numbered]

```

### 6.2.6 Footnotes

```

212 \setbeamertemplate{footnote}{%
213   \parindent 0em\noindent%
214   \raggedright
215   \usebeamercolor{footnote}%
216   \hbox to 0.8em{\hfil\insertfootnotemark}%
217   \insertfootnotetext\par%
218 }

```

### 6.2.7 Text and spacing settings

By default, Beamer frames offer the `c` option to *almost* vertically center the text, but the placement is a little too high. To fix this, we redefine the `c` option to equalize `\beamer@frametopskip` and `\beamer@framebottomskip`. This solution was suggested by Enrico Gregorio in an answer to [this Stack Exchange question](#).

```

219 \define@key{beamerframe}{c}[true]{% centered
220   \beamer@frametopskip=0pt plus 1fill\relax%
221   \beamer@framebottomskip=0pt plus 1fill\relax%
222   \beamer@frametopskipautobreak=0pt plus .4\paperheight\relax%
223   \beamer@framebottomskipautobreak=0pt plus .6\paperheight\relax%
224   \def\beamer@initfirstlineunskip{}%
225 }

```

### 6.2.8 Standout frames

`moloch` offers a custom frame format with large, centered text and an inverted background. To use it, add the key `standout` to the frame:

```
\begin{frame}[standout] ... \end{frame}.
```

**standout** Optional arguments to Beamer's frames are implemented using `\define@key` from the `keyval` package, which will execute code when the defined option is called. For the `standout` option, we begin a group, change the colors and set frame options.

```

226 \providebool{moloch@standout}
227 \define@key{beamerframe}{standout}[true]{%
228   \booltrue{moloch@standout}
229   \begingroup
230   \setkeys{beamerframe}{c}
231   \setkeys{beamerframe}{noframenumbering}

```

```

232 \ifbeamercolorempty[bg]{palette primary}{
233   \setbeamercolor{background canvas}{
234     use=palette primary,
235     bg=-palette primary.fg
236   }
237 }{
238   \setbeamercolor{background canvas}{
239     use=palette primary,
240     bg=palette primary.bg
241   }
242 }
243 \setbeamercolor{local structure}{
244   fg=palette primary.fg
245 }
246 \usebeamercolor[fg]{palette primary}
247 }

```

Then we just have to close the group after the standout slide is finished in order to restore the colours and fonts for the rest of the presentation. Unfortunately, we cannot use or this (see <http://tex.stackexchange.com/questions/226319/>). Instead, we prepend the `\endgroup` to `\beamer@reseteecodes`, which is run exactly once at the end of each slide.

```

248 \preto{\cmd{\beamer@reseteecodes}}{%
249   \ifbool{\moloch@standout}{%
250     \endgroup
251     \boolfalse{\moloch@standout}
252   }{}}
253 }{}}

```

We set the fonts and the alignment on the inner content, in such a way that the speaker's note layout isn't affected by the custom formatting.

```

254 \AtBeginEnvironment{\beamer@frameslide}{%
255   \ifbool{\moloch@standout}{%
256     \centering
257     \usebeamertfont{standout}
258   }{}}
259 }

```

### 6.2.9 Process package options

```

260 \moloch@inner@setdefaults
261 \ProcessPgfPackageOptions{/moloch/inner}

```

## 6.3 moloch outer theme

A `beamer` outer theme dictates the style of the frame elements traditionally set outside the body of each slide: the head, footline, and frame title.

### 6.3.1 Package dependencies

```
262 \RequirePackage{calc}
263 \RequirePackage{pgfopts}
```

### 6.3.2 Options

`progressbar` Adds a progress bar to the top, bottom, or frametitle of each slide.

```
264 \pgfkeys{
265   /moloch/outer/progressbar/.cd,
266   .is choice,
267   none/.code={%
268     \setbeamertemplate{headline}[plain]
269     \setbeamertemplate{frametitle}[plain]
270     \setbeamertemplate{footline}[plain]
271   },
272   head/.code={\pgfkeys{/moloch/outer/progressbar=none}
273     \addtobeamertemplate{headline}{}{%
274       \usebeamertemplate*{progress bar in head/foot}
275     }
276   },
277   frametitle/.code={\pgfkeys{/moloch/outer/progressbar=none}
278     \addtobeamertemplate{frametitle}{}{%
279       \usebeamertemplate*{progress bar in head/foot}
280     }
281   },
282   foot/.code={\pgfkeys{/moloch/outer/progressbar=none}
283     \addtobeamertemplate{footline}{}{%
284       \usebeamertemplate*{progress bar in head/foot}%
285     }
286   },
287 }
```

`\moloch@outer@setdefaults` Sets default values for outer theme options.

```
288 \newcommand{\moloch@outer@setdefaults}{%
289   \pgfkeys{/moloch/outer/.cd,
290   progressbar=none,
291 }
292 }
```

### 6.3.3 Deprecated Options

These options are deprecated and will be removed in a future version.

`numbering` Adds slide numbers to the bottom right of each slide.

```
293 \pgfkeys{  
294   /moloch/outer/numbering/.cd,  
295   .is choice,  
296   none/.code={%  
297     \PackageWarning{moloch}{The ‘‘numbering’’ option is deprecated.  
298     Use beamer’s ‘‘page number in head/foot’’ template instead}%">  
299     \setbeamertemplate{page number in head/foot}[default]  
300   },  
301   counter/.code={%  
302     \PackageWarning{moloch}{The ‘‘numbering’’ option is deprecated.  
303     Use beamer’s ‘‘page number in head/foot’’ template instead}%">  
304     \setbeamertemplate{page number in head/foot}[framenumber]  
305   },  
306   fraction/.code={%  
307     \PackageWarning{moloch}{The ‘‘numbering’’ option is deprecated.  
308     Use beamer’s ‘‘page number in head/foot’’ template instead}%">  
309     \setbeamertemplate{page number in head/foot}[totalframenumber]  
310   },  
311 }
```

### 6.3.4 Slide Numbering

Moloch defaults to numbering frames. To modify this, simply copy this line to your preamble and replace `framenumber`.

```
312 \setbeamertemplate{page number in head/foot}[framenumber]
```

### 6.3.5 Head and footnote

All good `beamer` presentations should already remove the navigation symbols, but `moloch` removes them automatically (just in case).

```
313 \setbeamertemplate{navigation symbols}{}  
  
headline Templates for the head- and footline at the top and bottom of each frame.  
footline  
314 \defbeamertemplate{headline}{plain}{}  
315 \defbeamertemplate{footline}{plain}{}%  
316 \begin{beamercolorbox}[  
317   leftskip=4pt,%
```

```

318     rightskip=5pt,%
319     wd=\textwidth,%
320     ]{footline}%
321     \usebeamercolor[fg]{page number in head/foot}%
322     \usebeamertemplate{page number in head/foot}%
323     \usebeamertemplate*{frame footer}%
324     \hfill%
325     \usebeamertemplate*{page number in head/foot}\vskip4pt%
326   \end{beamercolorbox}%
327 }

```

### 6.3.6 Frametitle

`frametitle` Templates for the frame title, which is optionally underlined with a progress bar.

```

328 \defbeamertemplate{frametitle}{plain}{%
329   \nointerlineskip%
330   \begin{beamercolorbox}[%
331     wd=\paperwidth,%
332     sep=1.1ex,%
333     leftskip=0.5ex,%
334     rightskip=\the\glueexpr 0.5ex plus 1fill\relax,%
335   ]{frametitle}%
336   \usebeamertemplate{frametitle}%
337   \vbox{} \vskip-0.4ex%
338   \strut\insertframetitle\nolinebreak\strut\par%
339   {%
340     \ifx\insertframesubtitle\empty%
341       \else%
342         {\usebeamertemplate{framesubtitle}\vspace{-0.8ex}\usebeamercolor[fg]{framesubtitle}\strut%
343       \fi%
344     }%
345   \end{beamercolorbox}%
346 }
347 \setbeamertemplate{frametitle continuation}{\romannumeral\insertcontinuationcount}

```

`progress bar in head/foot` Template for the progress bar optionally displayed below the frame title on each page. Much of this code is duplicated in the inner theme's template `progress bar in section page`.

```

348 \newlength{\moloch@progressinheadfoot}%
349 \newlength{\moloch@progressinheadfoot@linewidth}%
350 \setlength{\moloch@progressinheadfoot@linewidth}{0.4pt}%
351 \setbeamertemplate{progress bar in head/foot}{%

```

```

352   \nointerlineskip
353   \pgfmathsetlength{\moloch@progressinheadfoot}{%
354     \paperwidth * min(1,\insertframenumber/\inserttotalframenumber)%
355   }
356   \begin{beamercolorbox}[wd=\paperwidth]{progress bar in head/foot}
357     \tikzexternaldisable
358     \begin{tikzpicture}
359       \fill[bg]
360       (0,0)
361       rectangle
362       (\paperwidth, \moloch@progressinheadfoot@linewidth);
363       \fill[fg]
364       (0,0)
365       rectangle
366       (\moloch@progressinheadfoot, \moloch@progressinheadfoot@linewidth);
367     \end{tikzpicture}
368     \tikzexternalenable
369   \end{beamercolorbox}
370 }

```

### 6.3.7 Process package options

```

371 \moloch@outer@setdefaults
372 \ProcessPgfPackageOptions{/moloch/outer}

```

## 6.4 moloch font theme

A `beamer` font theme sets the style of the font used in the document.

### 6.4.1 Package dependencies

```
373 \RequirePackage{pgfopts}
```

### 6.4.2 General font definitions

```

374 \setbeamerfont{title}{size=\Large, series=\bfseries}
375 \setbeamerfont{author}{size=\small}
376 \setbeamerfont{date}{size=\small}
377 \setbeamerfont{section title}{size=\Large, series=\bfseries}
378 \setbeamerfont{block title}{size=\normalsize, series=\bfseries}
379 \setbeamerfont{block title alerted}{size=\normalsize, series=\bfseries}
380 \setbeamerfont*{subtitle}{size=\large}
381 \setbeamerfont{frametitle}{size=\large, series=\bfseries}
382 \setbeamerfont{framesubtitle}{size=\small}
383 \setbeamerfont{caption}{size=\small}
384 \setbeamerfont{caption name}{series=\bfseries}

```

```
385 \setbeamerfont{description item}{series=\bfseries}
386 \setbeamerfont{standout}{size=\Large, series=\bfseries}
```

## 6.5 moloch color theme

### 6.5.1 Package dependencies

```
387 \RequirePackage{pgfopts}
```

### 6.5.2 Options

`block` Optionally adds a light grey background to block environments like `theorem` and `example`.

```
388 \pgfkeys{
389   /moloch/color/block/.cd,
390   .is choice,
391   transparent/.code=\moloch@block@transparent,
392   fill/.code=\moloch@block@fill,
393 }
```

`colors` Provides the option to have a dark background and light foreground instead of the reverse.

```
394 \pgfkeys{
395   /moloch/color/background/.cd,
396   .is choice,
397   dark/.code=\moloch@colors@dark,
398   light/.code=\moloch@colors@light,
399 }
```

`\moloch@color@setdefaults` Sets default values for color theme options.

```
400 \newcommand{\moloch@color@setdefaults}{
401   \pgfkeys{/moloch/color/.cd,
402     background=light,
403   }
404 }
```

### 6.5.3 Base colors

```
405 \definecolor{mDarkBrown}{HTML}{604c38}
406 \definecolor{mDarkTeal}{HTML}{23373b}
407 \definecolor{mLightBrown}{HTML}{EB811B}
408 \definecolor{mLightGreen}{RGB}{0,128,128}
```

#### 6.5.4 Base styles

All colors in moloch are derived from the definitions of `normal text`, `alerted text`, and `example text`.

```
409 \newcommand{\moloch@colors@dark}{%
410   \setbeamercolor{normal text}{%
411     fg=black!2,
412     bg=mDarkTeal
413   }
414   \usebeamercolor[fg]{normal text}
415 }
416 \newcommand{\moloch@colors@light}{%
417   \setbeamercolor{normal text}{%
418     fg=mDarkTeal,
419     bg=black!2
420   }
421 }
422 \setbeamercolor{alerted text}{%
423   fg=mLightBrown
424 }
425 \setbeamercolor{example text}{%
426   fg=mLightGreen
427 }
```

#### 6.5.5 Derived colors

The titles and structural elements (e.g. `itemize` bullets) are set in the same color as `normal text`. This would ideally done by setting `normal text` as a parent style, which we do to set `titlelike`, but this doesn't work for `structure` as its foreground is set explicitly in `beamercolorthemedefault.sty`.

```
428 \setbeamercolor{titlelike}{use=normal text, parent=normal text}
429 \setbeamercolor{author}{use=normal text, parent=normal text}
430 \setbeamercolor{date}{use=normal text, parent=normal text}
431 \setbeamercolor{institute}{use=normal text, fg=normal text.fg!80!normal text.bg}
432 \setbeamercolor{structure}{use=normal text, fg=normal text.fg}
```

The “primary” palette should be used for the most important navigational elements, and possibly of other elements. `moloch` uses it for frame titles and slides.

```
433 \setbeamercolor{palette primary}{%
434   use=normal text,
435   fg=normal text.bg,
436   bg=normal text.fg}
```

```

437 }
438 \setbeamercolor{frametitle}{%
439   use=palette primary,
440   parent=palette primary
441 }

```

The `moloch` inner or outer themes optionally display progress bars in various locations. Their color is set by `progress bar` but the two different kinds can be customized separately. The horizontal rule on the title page is also set based on the progress bar color and can be customized with `title separator`.

```

442 \setbeamercolor{progress bar}{%
443   use=alerted text,
444   fg=alerted text.fg,
445   bg=alerted text.fg!50!black!30
446 }
447 \setbeamercolor{title separator}{%
448   use=progress bar,
449   parent=progress bar
450 }
451 \setbeamercolor{progress bar in head/foot}{%
452   use=progress bar,
453   parent=progress bar
454 }
455 \setbeamercolor{progress bar in section page}{%
456   use=progress bar,
457   parent=progress bar
458 }

```

Block environments such as `theorem` and `example` have no background color by default. The option `block=fill` sets a background color based on the background and foreground of `normal text`. The option `block=transparent` reverts the block environments to an empty background, which can be useful if changing colors mid-presentation.

```

459 \newcommand{\moloch@block@transparent}{%
460   \setbeamercolor{block title}{bg=}
461   \setbeamercolor{block body}{bg=}
462   \setbeamercolor{block title alerted}{bg=}
463   \setbeamercolor{block title example}{bg=}
464 }
465 \newcommand{\moloch@block@fill}{%
466   \setbeamercolor{block title}{%
467     bg=normal text.bg!80!fg

```

```

468 }
469 \setbeamercolor{block body}{%
470   bg=block title.bg!50!normal text.bg
471 }
472 \setbeamercolor{block title alerted}{%
473   bg=block title.bg,
474 }
475 \setbeamercolor{block title example}{%
476   bg=block title.bg,
477 }
478 }
479 \setbeamercolor{block title}{%
480   use=normal text,
481   fg=normal text.fg
482 }
483 \setbeamercolor{block title alerted}{%
484   use={block title, alerted text},
485   fg=alerted text.fg
486 }
487 \setbeamercolor{block title example}{%
488   use={block title, example text},
489   fg=example text.fg
490 }
491 \setbeamercolor{block body alerted}{use=block body, parent=block body}
492 \setbeamercolor{block body example}{use=block body, parent=block body}

```

#### Footnotes

```

493 \setbeamercolor{footnote}{fg=normal text.fg!90}
494 \setbeamercolor{footnote mark}{fg=.}

```

#### Footnotes

```

495 \setbeamercolor{footnote}{fg=normal text.fg!90}
496 \setbeamercolor{footnote mark}{fg=.}

```

We also reset the bibliography colors in order to pick up the surrounding colors at the time of use. This prevents us having to set the correct color in normal and standout mode.

```

497 \setbeamercolor{bibliography entry author}{fg=, bg=}
498 \setbeamercolor{bibliography entry title}{fg=, bg=}
499 \setbeamercolor{bibliography entry location}{fg=, bg=}
500 \setbeamercolor{bibliography entry note}{fg=, bg=}

```

### **6.5.6 Process package options**

```
501 \moloch@color@setdefaults  
502 \ProcessPgfPackageOptions{/moloch/color}  
503 \mode<all>
```
